

This document describes how to access your project's revision control system for source code (or other files).

The revision control system installed at IRMACS is Subversion. You can access the Subversion system either using the "svn" command as per the Subversion documentation, or you can run svnX which is in your Applications folder.

To connect, you will need the following information:

Name:

Path: `svn+ssh://cobalt.irmacs.sfu.ca/projects/subversion/<project_name>`

The User and Pass fields are optional and you will be asked for login information when you connection. Your login information is your IRMACS ID and password.
